

## Leadership

***Every student and staff member recognizes that their contributions help make their school and the division a better place.***

The Measurable Results Survey will be emailed to parents to complete between April 25th and May 5th, following the Easter break.

Students and staff members will also complete the survey during this window of time. This is the same MRA survey that was shared to all stakeholders in November 2021.

Following the second administration of the survey, our school will be able to compare results from fall to spring. This will highlight celebrations and determine areas for growth to be included in our school improvement plans for the upcoming school year.

To learn, play and be well together.

## Culture

***All staff and students recognize that they are responsible for positive change.***

Student Leadership Council has been working to build school spirit and sense of belonging; as informed by information revealed from the student survey data collected from the November Measurable Results Report. This Thursday is "Neon Day" and includes grade level soccer matches and a scavenger hunt; all organized by Student Council.

## April 2022 Newsletter

### Academics

***Educators empower students to lead their own learning.***

Thank you to our students who shared their progress and accomplishments with their families at our Celebration on March 31st. The positive energy in the building was both welcomed and long awaited!

Our next scoreboard is set to begin after the holiday break and will track student growth and progress in computational fluency. This describes ones ability to be flexible with numbers, use mental math strategies and explain math reasoning beyond using only memorization or algorithms. Classrooms will be using strategies such as math games, small group work, number talks, and representing numbers and equations using pictures, objects and symbols.

On another note, place based learning continues to provide authentic experiences for students to engage in the process of learning through exploration, investigation and in applicable environments. Thank you to our many community classroom partners for contributing to student learning!
